2013

Revision History

Rev.	Date	Description	
		Slide No.	Summary
1.00	Sept 4, 2013	All	Initialized revision

Outline

- Buffer usage (current)
- Physical layer (current)
- Tracking Information
- Design idea for multichannel

Buffer usage (current)

Buffer usage

- Use for debug (__DEBUG_DLMS), in \rl78g13QS+\application\dlms\physical\serial.c:

```
g_receive_data[256]
```

- For COSEM Object Layer, in \rl78g13QS+\application\dlms\objects\r_dlms_obis.c:

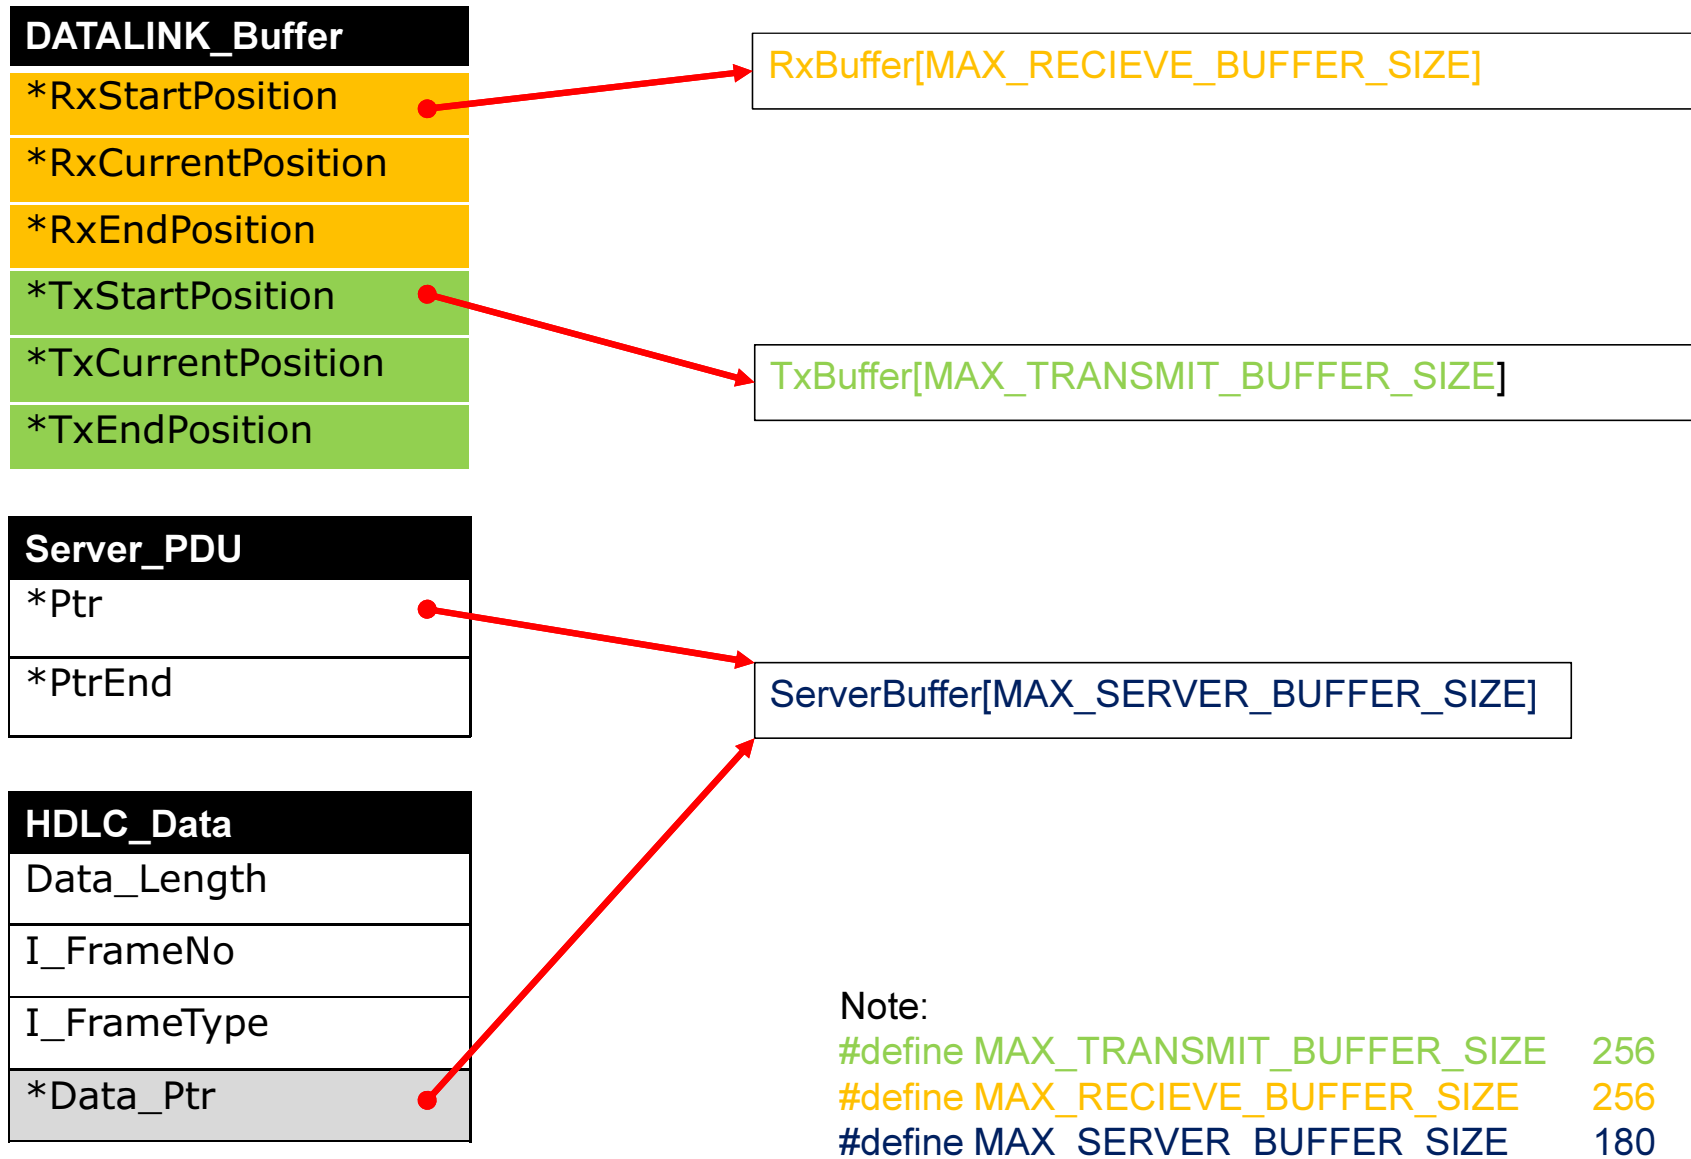

Note:

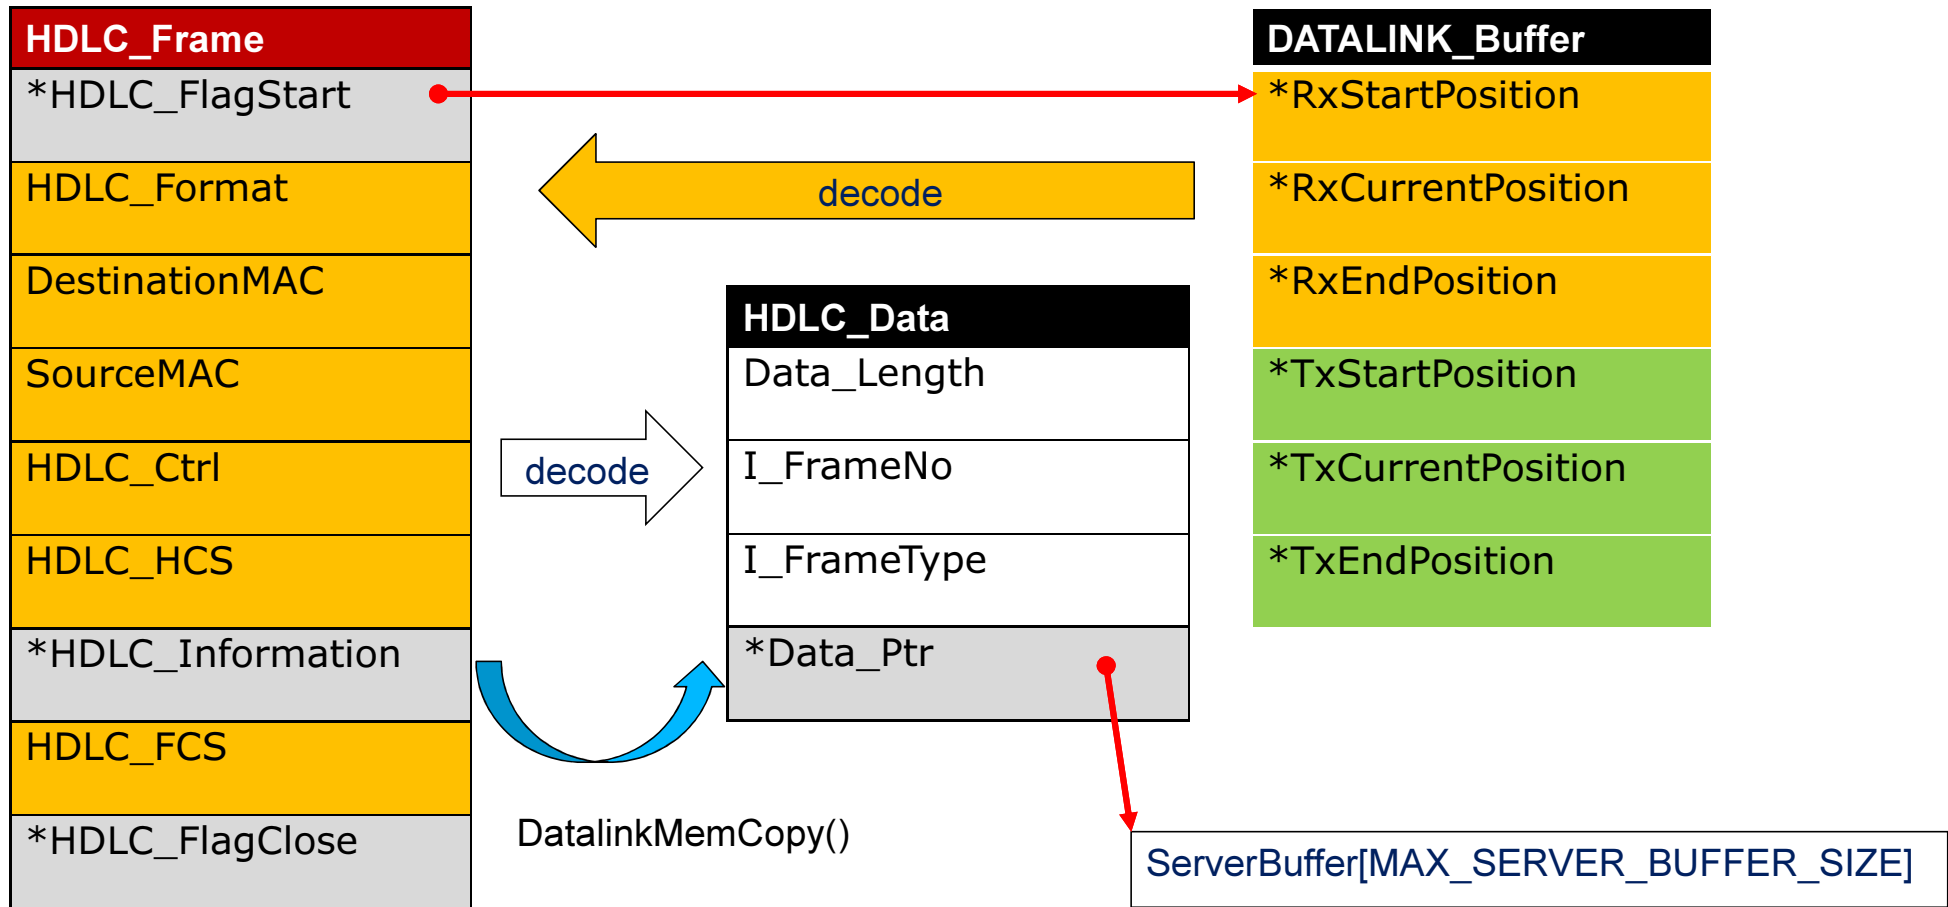

```
#define OBIS_SERVICE_DATA_BUFFER_LENGTH (180)
```

Buffer usage

- Data from/to UART

Buffer usage

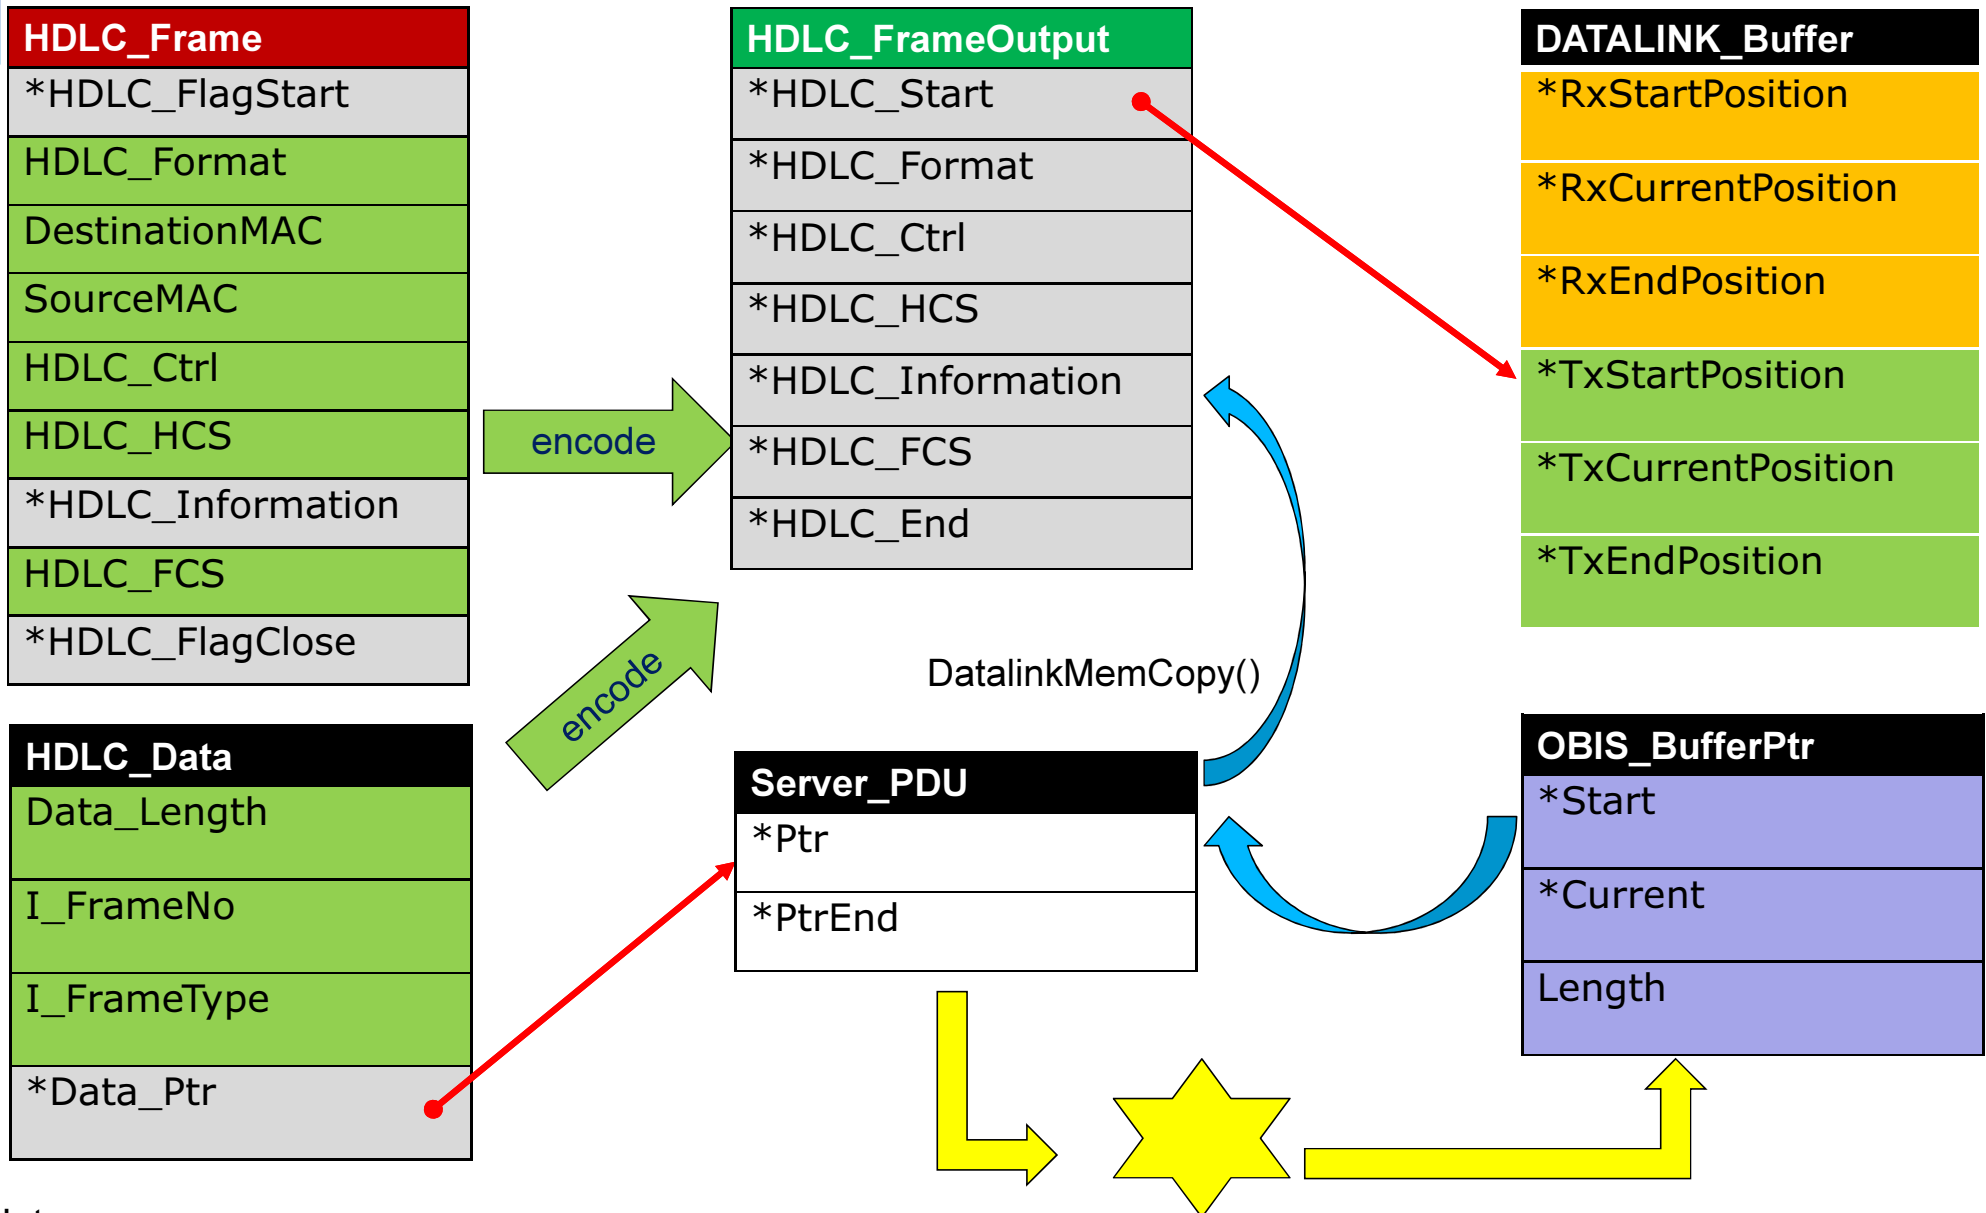

Note:

DataLinkHDLCDecode()

DataLinkIframeDecode()

Buffer usage

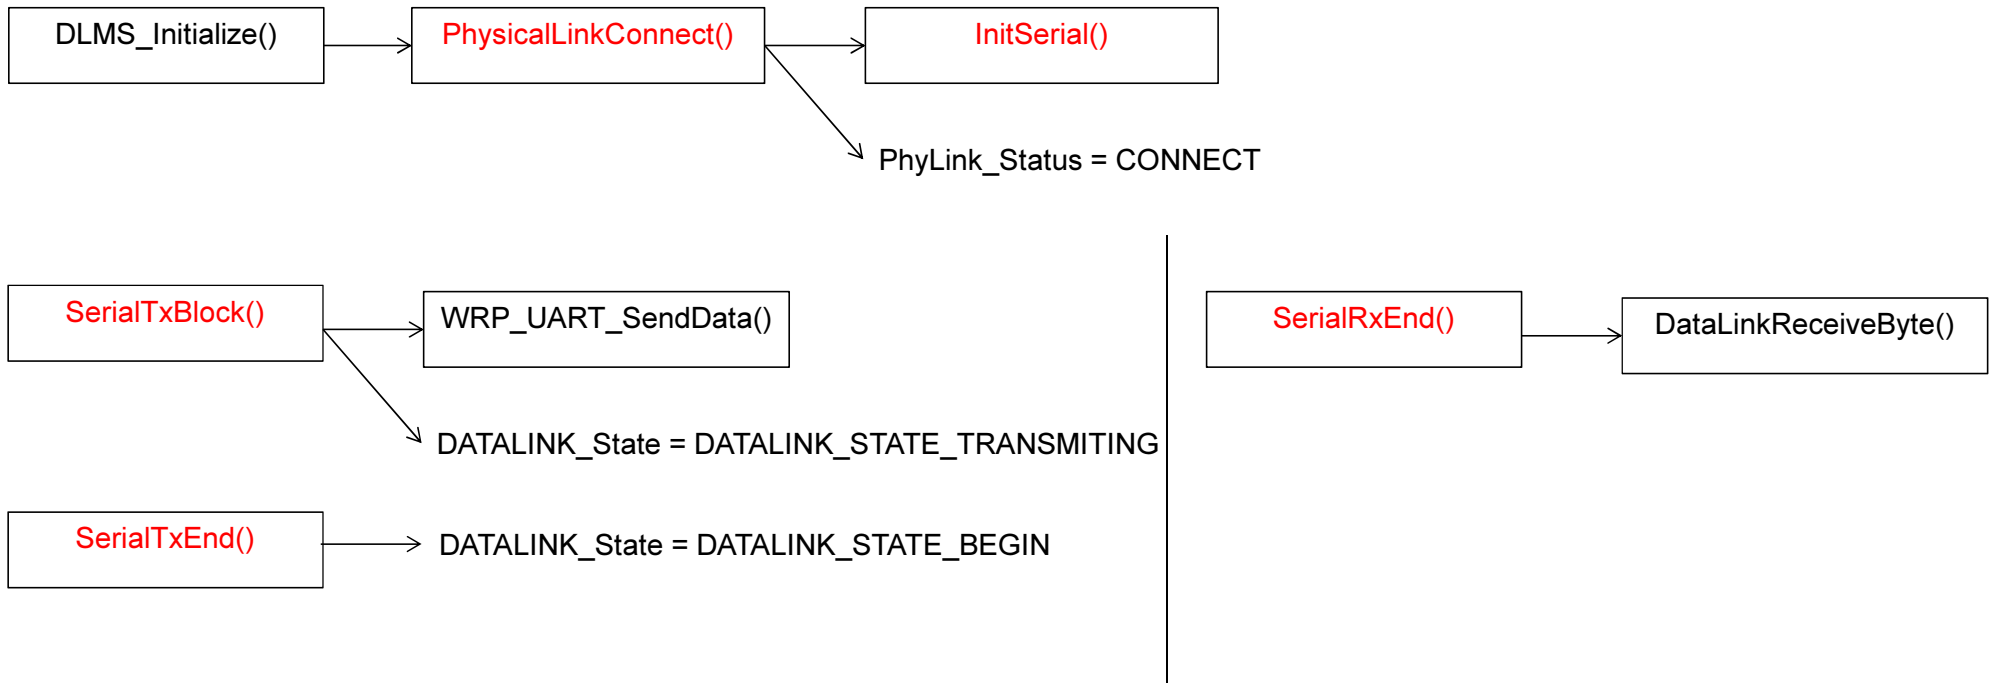

Note:
 DataLinkHDLCEncodeBegin()
 DataLinkIFrameEncode()

Physical channel (current)

Physical layer

- In \rl78g13QS+\application\dlms\physical\serial.h:
 - void `InitSerial`(void);
 - void `SerialTxEnd`(void);
 - void `SerialRxEnd`(Unsigned8 byte);
 - void `SerialTxBlock`(Unsigned8* BlockPtr, Integer16 Length);
- In \rl78g13QS+\application\dlms\physical\Physical_Layer.h:
 - extern Unsigned8 `PhyLink_Status`;
 - void `PhysicalLinkConnect`(void);
 - void `PhysicalLinkDisconnect`(void)

Design idea for multichannel

Buffer usage

- Data from/to UART

Use multi RX buffer

DATALINK_Buffer
*RxStartPosition
*RxCurrentPosition
*RxEndPosition
*TxStartPosition
*TxCurrentPosition
*TxEndPosition

RxBUFFER[
RxBuffer[MAX_RECIEVE_BUFFER_SIZE]

TxBUFFER[
TxBuffer[MAX_TRANSMIT_BUFFER_SIZE]

Server_PDU
*Ptr
*PtrEnd

ServerBuffer[
ServerBuffer[MAX_SERVER_BUFFER_SIZE]

HDLC_Data
Data_Length
I_FrameNo
I_FrameType
*Data_Ptr

Note:

#define MAX_TRANSMIT_BUFFER_SIZE 256

#define MAX_RECIEVE_BUFFER_SIZE 256

#define MAX_SERVER_BUFFER_SIZE 180

Physical layer

- In \rl78g13QS+\application\dlms\physical\serial.h:
 - void InitSerial(Unsigned8 channel);
 - void SerialTxEnd(Unsigned8 channel);
 - void SerialRxEnd(Unsigned8 channel, Unsigned8 byte);
 - void SerialTxBlock(Unsigned8* BlockPtr, Integer16 Length); -> Send for current channel
- In \rl78g13QS+\application\dlms\physical\Physical_Layer.h:
 - ~~extern Unsigned8 PhyLink_Status;~~ -> Move to channel_info_t define
 - void PhysicalLinkConnect(void);
 - void PhysicalLinkDisconnect(void);

Tracking Information

```
typedef struct {
    Unsigned8    channel_id;
} st_token_info;
```

```
#define MAX_CONNMGR_CHANNEL_NUMBER (2)
/* ID of physical channel(s) */
#define CHANNEL_NOT_SPECIFIED        (0xFF)
```

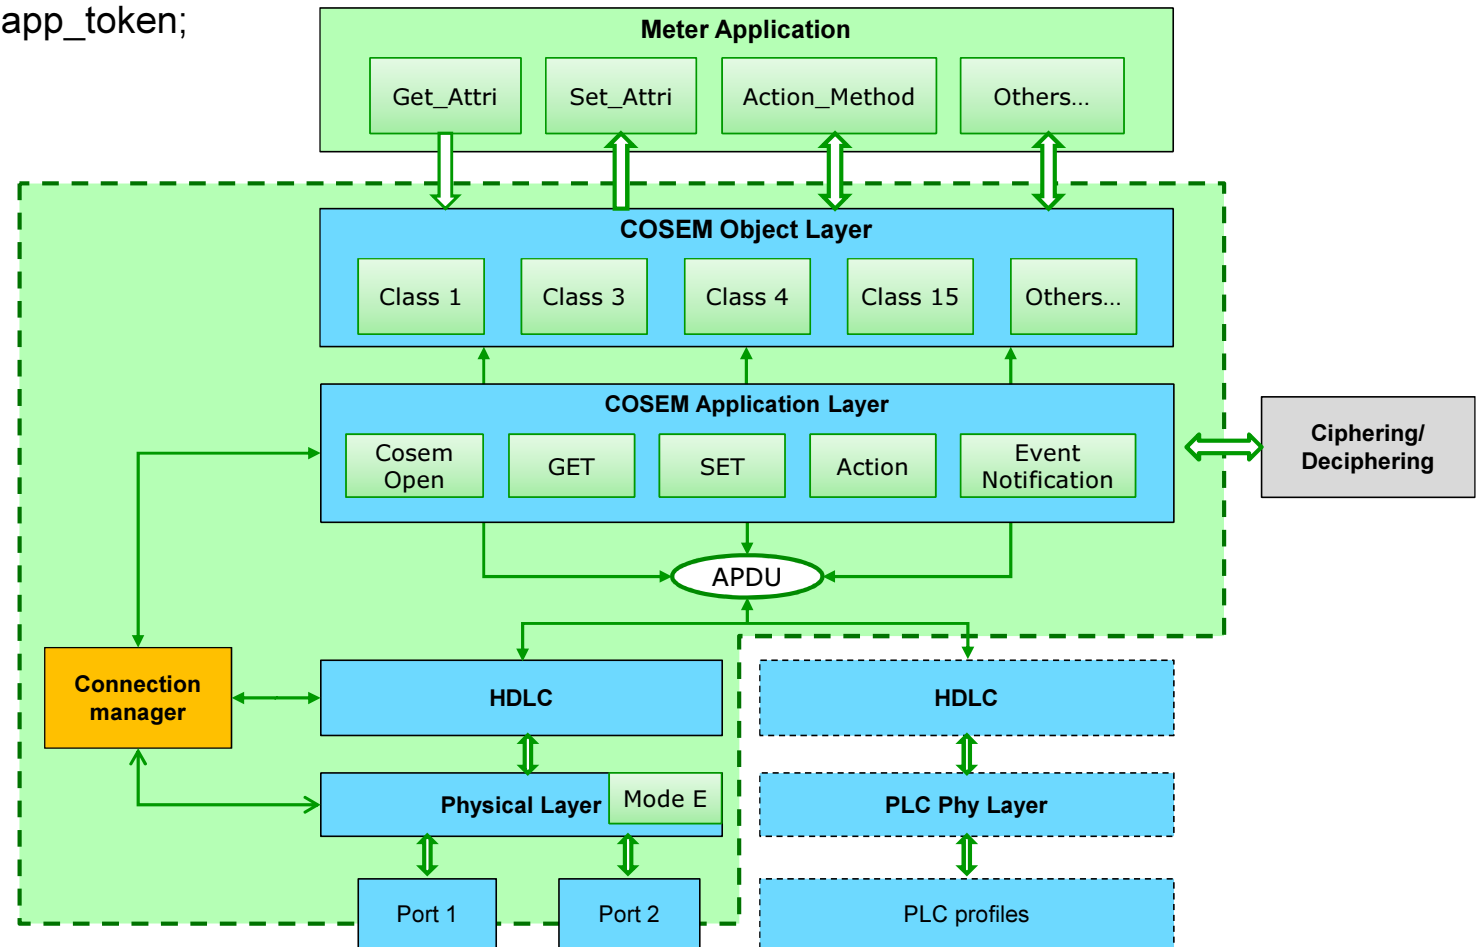

Common information for each channel:

```
typedef struct {
    Unsigned8    PhyLink_Status;
    /* Tx Buffer */
    Unsigned8    *SerialTx_Buffer_Str;
    Unsigned8    *SerialTx_Buffer_End;
    Unsigned8    *TxStartPosition;
    Unsigned8    *TxCurrentPosition;
    Unsigned8    *TxEndPosition;
    /* Rx Buffer */
    Unsigned8    *SerialRx_Buffer_Str;
    Unsigned8    *SerialRx_Buffer_End;
    Unsigned8    *RxStartPosition;
    Unsigned8    *RxCurrentPosition;
    Unsigned8    *RxEndPosition;
    /* Timeout info */
    st_TimeoutCount    Timeout_Level;
    st_TimeoutCount    Timeout_ms;
    st_TimeoutEnable    Timeout_Enable;
    /* Datalink info */
    Unsigned8    DATALINK_State;
    st_DATALINK_PAR    DATALINK_parameter;
    Unsigned16    ByteCount;
    Unsigned8    Server_State;
    Unsigned8    Prev_nR;
    Unsigned8    Prev_nS;
    Unsigned8    nR;
    Unsigned8    nS;
    Unsigned8    Client_Status;
} st_channel_info;
```

Connection manager

```
typedef struct {
    Unsigned8
    Unsigned8
    channel_info_t
    token_info_t
} st_connect_mgr_info
```

```
current_channel_id;
channel_count;
channel_info[MAX_CONNMGR_CHANNEL_NUMBER];
app_token;
```
